a (5 marks)

LIST A	I	II	III	IV	V
LIST B	D	E	A	B	F

wazaelimu.com

3. a) i. tittle
 ii. scale
 iii. north direction
 iv. Key
 b) i. There must be deposition
 ii. Presence of vegetations
 iii. Slow River velocity
 iv. Presence of meanders
 v. presence of gentle slope
4. a) **Rocks.** Are natural solid materials made up of various minerals in different rations.it differ in colour, texture, density, mode of formation and ability to resist erosion? **(2 marks)**
- b) **Metamorphism.** Is the process which involves the change of one rock type to another rock type. There are three kinds include dynamic metamorphism, thermal metamorphism and thermaldynamic metamorphism. **(2 marks)**
- C) **Vulcanicity** – is the process through which molten materials and gaseous are forced from the Earth’s interior into or onto the Earth’s surface to form intrusive or extrusive rocks on the Earth’s surface **(2 marks)**
- d) **Mass wasting.** Refers to the downward movement of weathered materials on a slope under the influence of gravity, the angle of slope and gravity are major determinants of mass wasting. **(2 marks)**
- e) **Earthquake.** Is the sudden vibration or shaking of part of the earth’s crust caused by natural forces operating beneath the earth’s crust. Earthquakes usually occur in faulted and volcanic areas. **(2 marks)**

5. a) i) Internal Structure is the inner zone consists of three concentric layers namely Crust, mantle and Core WHILE External structure is outer zone which consist of Atmosphere, hydrosphere, biosphere and the Lithosphere (2marks) ii) **Caldera** is a large rounded depression formed when the upper part of volcano is subsided into the crust WHILE **Crater** is a small depression on the top of volcanic cone formed by violent volcanic eruption when the upper part of volcanic plug is blown off (2 marks)

iii) **Magma** are molten materials solidifies within the earth's crust WHILE **Lava** is molten materials reaching the earth's surfaces. (2 marks)

b) i/ **Igneous rocks. These** are rocks formed by the process of cooling and solidification of molten materials (magma and lava) Igneous rock associated with volcanic activity example granite rock (2 marks) ii/ **Sedimentary rock.** These are rocks formed by depositing eroded materials transported by moving water, wind and ice. They resulted from continued weathering, erosion, transportation, deposition and lithification of sediments. Example sandstones, chalk and lime stones (2 marks)

iii/ **Metamorphic rocks** These are rocks which are formed when one type of rocks undergo changes into another type of rock after having been subjected under intense heat or pressure or both. Any rock can change to form metamorphic rock example limestone to marble. (2 marks)

6 a) i) Mountain's example Mount Kilimanjaro in Tanzania ii) Plains, examples Serengeti plains of Tanzania **1mark @= 5 marks** iii) Plateaus, example, deccan plateaus iv) Basin examples Congo basin in DRC v) Valleys

b) A labeled relevant diagram of an Ocean Floor (5 marks)

7.i) Help to develop methods and skills of observing, measuring, recording and interpreting of phenomena.

ii) Acquire skills for environmental conservation and management

iii) Develop awareness of our country as our heritage. iv)

Understanding the best ways of utilizing natural resources

v) Expand knowledge and skills in everyday activities like agriculture, tourism, mining etc.

Any 5 points @ 02 marks – 10 marks

8 a) i. topographical map

ii. Political map

iii. Road and railway map

6. b) i. title
ii. scale
iii. north direction
iv. Key
v. Frame

9) Points (any five (5) importance of rocks @2marks = 10 marks)

- ✓ Source of minerals deposits
- ✓ Building and constructional materials
- ✓ Source of soil formation
- ✓ Source of energy resources eg coal
- ✓ Raw materials for manufacturing industries eg limestone
- ✓ Decoration and art materials
- ✓ Tourist attractions

10. i. Introduction, definition of map reading and interpretation - 03 marks

- Main body (importance of studying map reading (six points))

- It helps during travelling
- It used to conduct research
- It provides employment among people
- It shows political bounders
- It helps to learn about whether conditions
- It helps to learn and to find places
- It helps for planning rural and urban areas

NB: Any six points

-Conclusion - **02 marks**
